

Official Losing Tickets Lottery Rulebook

Lígalo Internacional © 2026

The Losing Tickets Lottery is a free promotional benefit from Lígalo Internacional. Each day, losing horse-racing tickets within the administration-configured date range automatically enter a random draw. The prize is awarded as a Free Bet, not as withdrawable cash.

1. Lottery Concept

The Losing Tickets Lottery rewards a randomly selected losing ticket among all losing wagers of a day — or of an administration-configured date range — with a Free Bet.

This promotion partially compensates the player who had an unfavorable day, returning to the community part of the value wagered.

The lottery is completely free: the user pays nothing to participate. It is enough to have played and lost at least one wager within the configured range.

2. How to Participate

Participation is automatic. No prior registration is required.

- Each losing wager of the user in the modules included by the administration counts as ONE ticket in the lottery.
- The more losing wagers the user has, the higher the probability of winning.
- Default included modules are horse-racing modules (Winner, GPS, exotics, etc.) within the date range configured by the administration.
- The administration may expand or reduce the included modules per lottery, and decide whether bot tickets are included or not.

3. Prize: Free Bet (Not Withdrawable Cash)

IMPORTANT: the Losing Tickets Lottery prize is awarded as a Free Bet, not as withdrawable cash.

Free Bet characteristics:

- Amount: the prize amount is configured per lottery (typically \$5 USD, but may vary).

- Rechargeable model: up to 10 wagers with the FB until the balance or wager limit is exhausted.
- Validity: 30 days from the lottery date.
- Allowed modules: Winner, GPS and Horse Racing Parlay.
- Net winnings generated with the FB ($\text{stake} \times (\text{odds} - 1)$) are credited to the user real balance, fully withdrawable.

For complete Free Bet rules, see the Free Bets Rulebook in the Rulebooks section.

4. Lottery Execution

The lottery runs at the time configured by the administration (typically 21:00 operator local time).

- Lotteries can be automatic daily draws or manual draws executed by the administration.
- Each draw shows an animation with rotating tickets before revealing the winner.
- The lottery outcome is random and verifiable; it is recorded in the database along with the winning ticket.
- Once executed, the lottery cannot be reversed. The status becomes "finalized" and the Free Bet is credited to the winning user.

5. Special Cases — House Bots

The administration may include bot tickets (house accounts) in the lottery to increase the house edge for specific draws.

- If the lottery winner is a bot, the prize is NOT credited to any real user (the house "wins").
- The lottery is marked as finalized and the range of losing tickets included in it CANNOT enter future lotteries (already drawn).
- This is a standard operational tool and is indirectly announced via the "bots only" mode or the "include bots" field in the lottery configuration.

6. Restrictions and General Rules

- The user must have an active and current account at the moment of the draw.
- Persons under 18 cannot participate.
- Multiple accounts are forbidden — tickets from duplicate accounts will be disqualified before the draw.
- Tickets from a user determined to be fraudulent (e.g. coordinated plays to "farm" entries) will be excluded.
- Lígalo Internacional administration reserves the right to void a lottery if irregularities are detected, even after its execution.
- Lígalo Internacional may modify the rules, amounts or frequency of the lottery at any time.

7. Loyalty Program

- All wagers — including those entering the losing tickets lottery and those paid with the Free Bet prize — generate 1 LP per \$1 USD wagered.

- Accumulated LP are automatically redeemed each night for Free Bets, at the current Loyalty Program rate.
